

Up stairs, down stairs – functionality keeps the promise of design

The demands placed by airport management are growing continually. So it's no wonder that innovative and service-oriented companies come up with ideas and products that meet the requirements of airport operators for optimized passenger traffic and operations.

EXPRESSO's baggage cart for escalator use combines the convenience and manoeuvrability of a standard luggage cart with the safety components required for escalator use, packaged in an appealing design.

Previously, escalator-compatible luggage carts rarely had a positive effect on the ambience of modern air and rail terminals. But now, EXPRESSO's Safety First Mark II makes an optically refreshing contribution.

During further development of the classical escalator cart, EXPRESSO applied demanding criteria. The result is an ideal balance between design and functionality:

The Safety First Mark II is a guarantee for ergonomic and safe handling. With stainless steel quality throughout, it is also suitable for the climatic conditions of any country.

The large and appealing advertising panels at the front and on the basket can be used lucratively for additional earnings.

With a load capacity of 120 kg and a generous load area, Safety First Mark II is an ideal companion for passengers. With its help, travellers can reach every level of a terminal via escalators and moving pavements.

Safety instructions for the cart's use are clearly visible in the push handle.

Top-quality materials and the EXPRESSO modular system keep maintenance cost very low, turning the escalator trolley into an important economic factor of an airport's logistics. With its modern design, the Safety First Mark II is a guarantee for smooth operations and satisfied customers.
