

Twist it and turn it whichever way you like

Effective roll handling with the battery-powered hoisting/turning system
Lift&Drive

The roll-handling prong converts the mobile lifting assistant Lift&Drive from EXPRESSO Deutschland GmbH into a hoisting and turning system for handling a wide range of rolls. Thanks to the increased stability provided by the dual-strut wheelbase, material rolls weighing up to 150 kg can be lifted safely and rotated by hand.

Pasteboard tubes are clamped by means of integral steel gripping segments. The self-clamping prong is unlatched manually by simply pulling its handle. No tools are required to remove the prongs, which are available for different tube diameters.

Various wheelbases and heights are available, thus enabling Lift&Drive to be matched precisely to individual requirements, e.g. as a roll-handling system for removing rolls from pallets or shelves, loading them into machines, etc. Every battery-powered lifting assistant from Espresso is fitted with a removable remote control unit, a parking brake, and a spindle drive with safety clutch.

Apart from the roll-handling prong, a range of platforms, forks, and various gripping/turning accessories for rolls and drums are available. Standard versions without a roll-handling prong can be supplied for loads up to 225 kg, and are manufactured in EXPRESSO's typical modular aluminium system.
