

Heavy loads moved easily, safely, and quickly!

EXPRESSO's complete range of four-wheel carts and trolleys not only makes order-picking faster, but also more ergonomic.

The demands for reliability and flexibility expected from delivery companies are increasing continuously. Fast order-picking and transport, with no waiting periods or delays, are essential for that competitive edge. Hereby, the use of outdated transport equipment is a severe handicap.

Intelligent manual transport devices are the answer, because they provide the necessary advantages in terms of productivity and efficiency. Well-designed transport equipment enables your employees to move loads efficiently, and at the same speed throughout the working day. Hereby, manoeuvrability and convenient vehicle handling play an important role. The minds of employees using old, unsafe carts that can also be difficult to move, are concerned with the physical effort instead of being centered on the demanding task of order picking and preparing goods for shipment. This leads to reduced working speed and increased error rates. The comprehensive range of order-picking carts and other four-wheel trolleys from EXPRESSO Deutschland GmbH offers smooth-running, application-oriented solutions, which contribute decisively to optimized logistic procedures.

Convincing details

The most convincing arguments for our order-picking carts are the many application- and user-specific features: Various heights, sizes, and materials (steel, aluminium, powder coated or electrogalvanised), load capacities up to 2t, several shelf levels, diverse load platforms, end panels, wire-mesh sides, and integrated step ladders.

Other useful accessories: storage compartments, notepad supports, extra shelves, universal baskets, high-quality wheels and castors, individual electrical fittings, battery packs for mains-independent operation, pull-out shelves on rollers, plus many more. By means of these individual versions and accessories, our carts can be tailored to satisfy all business-specific requirements.

touch2move – The future is here

A major sensation was the introduction of EXPRESSO's self-propelled order-picking vehicles. The touch2move obeys the user's natural, intuitive movements during manoeuvring, thanks to its smart drive technology. Simply grasping the sensor handles of the patented concept is enough to make the transport of heavy loads such as packaged paper an easy matter. Two independent braking systems provide dual safety for the operator. Ergonomic handling of goods not only reduces health risks, but also improves your employee's motivation. Furthermore, the novel drive technology helps you comply with increasingly strict accident prevention regulations. All of EXPRESSO's four-wheel carts with a minimum width of 500 mm can be fitted with the smart sensor technology.
