

## The transport of heat pumps, water heaters, and storage cylinders must become safer, more efficient, and also more ergonomic.

Customers expect suppliers to be competent consultants when it comes to modern and efficient heating technology. Moreover, delivery should also be precise, professional, safe, and on schedule. This will become evident at the latest when the system is to be installed. Therefore, the branded manufacturer EXPRESSO has used components from its modular aluminium system to create specialized aluminium transport trucks precisely for these applications.

The new hand trucks were presented to experts for the first time at the IFH trade fair in Nuremberg. Visitors were impressed by the flexible application possibilities and the smart details offered by the transport devices. The lightweight aluminium hand trucks have an amazing load capacity, and are therefore the ideal vehicle companions – support skids greatly simplify the traversing of steps and kerbs, and the ergonomic 'dog-ear' handles provide a wide range of gripping options.

The product range is supplemented by industry-oriented accessories such as carrying frames that enable heavy goods to be transported up/down stairs with two people, supporting wheels that provide assistance when moving goods over large distances, or lashing straps and soft protectors that ensure safety and stability during transport.

Well-known companies who use EXPRESSO's specialized hand trucks appreciate the practicability and quality of the products. Thanks to the special features, sensitive and valuable goods are delivered to customers safely, which prevents claims for damage, resulting costs, and a possible loss of image. In addition, service personnel is able to handle the heavy loads ergonomically and without great effort at the place of delivery. This in turn reduces the risk of back injuries, and has a positive effect on absenteeism due to illness.

With the standard truck height of 1700 mm – of course, other heights are available from the modular system – the user always has a clear view of the area to be traversed ahead. Nonetheless, the hand truck is sufficiently tall to ensure that sensitive heat pumps, water heaters, and storage cylinders are always held and supported securely. In this respect, good product design also means handiness and excellent operability. Working equipment can be compared with clothing – a perfect fit is essential, i.e. it must be adapted precisely to the user and to the task to be performed. Only if all the prerequisites are fulfilled, can work be carried out optimally and therefore efficiently. EXPRESSO also keeps company advertising for the customers in mind: Free of charge, every new hand truck can be fitted with an advertising panel showing the company logo or a promotional text. This contributes to the company's professional image and helps to protect its property.

More than 2000 different aluminium hand trucks for the most varied industries and applications are available ex-stock from EXPRESSO's modular system. What's more: Should a worn part have to be replaced – no problem! Every component is also available as a spare part. This ensures that the equipment is always kept in top condition, and its useful life is multiplied several times.
