

## **Nowadays, you need to be just that extra bit better!**

In order to comply with the growing demands that guests place on personnel in the hotel and gastronomic business, and to ensure smooth operations in the service area, it has become increasingly important to provide efficiently organized services.

With a new and comprehensive range of transport equipment “dedicated to the guest”, EXPRESSO – the established manufacturer of professional transport equipment based in Kassel, Germany – offers that extra plus in mobility, elegance, and efficiency. Whether in the lobby, for general services, or during the organization of conventions – because the transport equipment is matched precisely to their needs, hotels and restaurants are able to make a highly professional impression on their guests. During the past decades, many of EXPRESSO's transport solutions have been confirmed more than 100.000 times. Others, such as the touch2move drive system for four-wheel carts, are innovative, future-oriented products that are becoming increasingly popular in the hotel and gastronomic business.

Customers are able to choose a precisely tailored solution from a wide range of products. Our baggage trucks are available in numerous versions: They come with a grey or elegant dark red finish, as well as polished or gold-anodized aluminium. This enables you to harmoniously match the transport equipment “made in Germany” to the ambience of your premises. The hard-wearing protective covering on footplates and rear upright panels of the hand trucks ensure safe baggage handling. When large groups are checking in, EXPRESSO's baggage trolleys are ideal assistants for your service personnel.

### **Rational down to the smallest detail**

EXPRESSO products are manufactured using a modular system, enabling us to provide individual, customer-specific solutions. They offer extraordinary strength coupled with a long service life, whereby permanent availability underlines their outstanding economic advantages.

Several important safety and design-related details emphasize the differences between our professional equipment and “normal” transport devices: Slide/support skids help you negotiate small steps easily and assist during loading; non-marking quality pneumatic tyres permit utmost loading with minimum rolling resistance; plus many other smart and convenient details. The ergonomic and practical equipment not only benefits the health of your service personnel but also makes a highly motivating contribution towards employee satisfaction. In a nutshell: a comprehensive, professional range of products that provides all-round convenience for your guests.
