

## **Fast and safe delivery – aluminium service trucks as professional partners**

**Frequently, heavy and bulky goods must be moved and handled by one person. As a consequence, spinal problems and injuries can occur. Here, it is helpful to have a rugged companion in the shape of a lightweight and ergonomic hand truck.**

Since decades, stacking trucks and parcel trucks have been used worldwide by mail distribution services. Together with the German "Deutsche Post AG", the Kassel-based supplier of transport equipment, Expresso, developed a hand truck that meets the special requirements of parcel delivery services. Although very easy to handle, the truck is robust and safe to use when delivering delicate goods. In short: the features expected from professional equipment.

Meanwhile, more than 10.000 of these service hand trucks are in use, and also private operators such as UPS have come to appreciate their user-specific design.

Ingenious details such as skids for easier negotiation of kerbs and steps, tubular footplates with support feet to prevent the load becoming soiled, and center struts that prevent small packages slipping through, help to make EXPRESSO's parcel truck an indispensable companion for service teams.

Expresso hand trucks are built using the aluminium modular system, whereby the individual components, such as uprights, footplates, skids, and ergonomical handles are the basis for specific, application-oriented transport devices.

### **Ergonomic design, safety and productivity**

Moreover, the ergonomic design of Expresso hand trucks gives top priority to the users' health and safety, resulting in positive economic effects.

As opposed to conventional, fixed constructions that limit the application range and involve considerable costs for maintenance and service, the modular approach is rational and economical.

Should a worn part have to be replaced – no problem! Every component is also available as a spare part. In this way, the transport equipment is always kept in top condition, and its useful life is multiplied several times.
