

From light dock plates to rugged dock-edge levellers for loads up to 5 tons EXPRESSO offers a complete range for solving every loading task

The demands for reliability and flexibility expected from delivery companies are increasing continuously. Short loading/unloading times with no waiting periods for vehicle drivers are essential to give a company that competitive edge.

With a wide product range of aluminium dock plates & dock boards, EXPRESSO Deutschland GmbH, a leading supplier of goods transport and handling equipment offers individual and application-oriented solutions for optimized logistic procedures.

EXPRESSO is able to provide customized solutions for dock plates & boards quickly. Drivers who do not have a hydraulic tail-lift on their vehicle, must no longer do without loading assistance, because EXPRESSO's mobile and/or folding dock plates are ideal vehicle companions.

They are compact and can be stored conveniently in the van or truck, making them immediately available for loading/unloading. This makes the driver independent from external loading assistance, enabling them to decide freely when and how to load/unload. In general, the loading and unloading of trucks, vans, and rail waggons is expected to be a smooth operation. Here, EXPRESSO's flexible dock boards (also movable sideways in guide rails) and the mobile dock plates are a guarantee for efficient, user-oriented logistic procedures.

Safe and rational down to the smallest detail

The surface of EXPRESSO's aluminium dock plates & boards are corrosion resistant with non-slip, cross-grooved, cross-grooved plus or five-bar studded profile which guarantees safe transport, i.e. in poor weather conditions. The high quality is also the best guaranty for a long life.

Rubber profiles underneath prevent the dock plates from slipping and the smaller versions are fitted with stop flanges as standard for utmost safety. For convenient handling, handhold cutouts and wheels (standard or optional) enable the dock plate or board to be moved to the vehicle very easily.

Many of the dock plates & boards can be handled by a single person without problems. For larger versions, EXPRESSO recommends two persons or using the lever frame that is supplied as standard. Angled roll-on/roll-off plates ensure smooth and easy crossing. In order to compensate for height differences, some plate versions have double hinges. This provides a smooth incline for the loaded transport equipment. Guide rails are also available, e.g. for mounting dock-edge levellers, permitting them to be slid sideways and out of the way when not in use.
